banach lattices marek wójtowicz received 29 october 2002 let e be a banach lattice and let m be a norm-closed and dedekind σ -complete ideal of e . if e contains a lattice-isometric copy of ∞ , then e/m contains such a copy as well, or m contains a lattice copy of ∞ . this is one of the consequences of more general results presented in this paper. **universitext - math.uni-tuebingen** - where a is a linear operator on a banach space x . here, the problem consists in finding a differentiable function u on $r +$ such that (acp) holds. if for each initial value $x \in x$ a unique solution $u(\cdot, x)$ exists, then $t(t)x := u(t, x), t \geq 0, x \in x$, defines an operator semigroup. for the "working mathematician," (acp) is the problem, and $t(t)$ **research article weak compactness of almost limited operators** - research article weak compactness of almost limited operators ... banach lattices , universitext, springer, berlin, germany, .
